

Serial No. 10/692,387

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application

LISTING OF CLAIMS**Claims 1-13 (canceled)**

Claim 14 (currently amended): A method of producing ophthalmic devices from polymeric compositions produced through a polymerization of one or more macromonomers, said method comprising:

casting one or more polymeric compositions in the form of a rod;

lathing or machining said rod into disks; and

lathing or machining said disks into ophthalmic devices;

wherein said one or more macromonomers have having a formula of

wherein the R groups are the same or different; each R group ~~comprises an aromatic group covalently attached to a linking group~~ is selected from the group consisting of

Serial No. 10/692,387

R_1 is an aromatic-based substituent or an alkyl; x is a non-negative integer; and y is a natural number; ~~said method comprising:~~

~~casting said one or more polymeric compositions in the form of a rod;~~

~~lathing or machining said rod into disks; and~~

~~lathing or machining said disks into ophthalmic devices.~~

Serial No. 10/692,387

R_1 is an aromatic-based substituent or an alkyl; x is a non-negative integer; and y is a natural number, said method comprising:

~~pouring one or more polymeric compositions into a mold prior to curing;~~

~~curing said one or more polymeric compositions; and~~

~~removing said one or more polymeric compositions from said mold following curing thereof.~~

Claims 16-17 (canceled)

Claim 18 (previously presented): The method of claim 14, 15, 21, 22, 23, 24, 25 or 26 wherein said ophthalmic device is a contact lens.

Serial No. 10/692,387

Claims 19-20 (canceled)

Claim 21 (currently amended): A method of producing ophthalmic devices from polymeric compositions, said method comprising:

casting one or more polymeric compositions in the form of a rod;

lathing or machining said rod into disks; and

lathing or machining said disks into ophthalmic devices;

wherein said one or more polymeric compositions are produced through a polymerization of one or more non-siloxy aromatic-based monomers with one or more macromonomers having a formula of

wherein the R groups are the same or different; each R group ~~comprises an aromatic group covalently attached to a linking group~~ is selected from the group consisting of

Serial No. 10/692,387

R_1 is an aromatic-based substituent or an alkyl; x is a non-negative integer; and y is a natural number, said method comprising:

~~casting said one or more polymeric compositions in the form of a rod;~~

~~lathing or machining said rod into disks; and~~

~~lathing or machining said disks into ophthalmic devices.~~

Claim 22 (currently amended): A method of producing ophthalmic devices from polymeric compositions, said method comprising:

casting one or more polymeric compositions in the form of a rod;

lathing or machining said rod into disks; and

Serial No. 10/692,387

lathing or machining said disks into ophthalmic devices:

wherein said polymeric compositions are produced through a polymerization of one or more non-aromatic-based hydrophobic monomers with one or more macromonomers having a formula of

wherein the R groups are the same or different; each R group comprises an aromatic group covalently attached to a linking group is selected from the group consisting of

Serial No. 10/692,387

R_1 is an aromatic-based substituent or an alkyl; x is a non-negative integer; and y is a natural number, said method comprising:

~~casting said one or more polymeric compositions in the form of a rod;~~

~~lathing or machining said rod into disks; and~~

~~lathing or machining said disks into ophthalmic devices.~~

Claim 23 (currently amended): A method of producing ophthalmic devices from polymeric compositions, said method comprising:

casting said one or more polymeric compositions in the form of a rod;

lathing or machining said rod into disks; and

lathing or machining said disks into ophthalmic devices;

wherein said one or more polymeric compositions are produced through a polymerization of one or more non-aromatic-based hydrophilic monomers with one or more macromonomers having a formula of

Serial No. 10/692,387

wherein the R groups are the same or different; each R group ~~comprises an aromatic group~~
~~covalently attached to a linking group~~ is selected from the group consisting of

Serial No. 10/692,387

R_1 is an aromatic-based substituent or an alkyl; x is a non-negative integer; and y is a natural number, ~~said method comprising:~~

~~casting said one or more polymeric compositions in the form of a rod;~~

~~lathing or machining said rod into disks; and~~

~~lathing or machining said disks into ophthalmic devices.~~

Claim 24 (currently amended): A method of producing ophthalmic devices from polymeric compositions, said method comprising:

pouring one or more polymeric compositions into a mold prior to curing;

curing said one or more polymeric compositions; and

removing said one or more polymeric compositions from said mold following curing thereof;

wherein said one or more polymeric compositions are produced through a polymerization of one or more non-siloxy aromatic-based monomers with one or more macromonomers having a formula of

Serial No. 10/692,387

wherein the R groups are the same or different; each R group comprises an aromatic group covalently attached to a linking group is selected from the group consisting of

Serial No. 10/692,387

R_1 is an aromatic-based substituent or an alkyl; x is a non-negative integer, and y is a natural number, ~~said method comprising:~~

~~pouring said one or more polymeric compositions into a mold prior to curing;~~

~~curing said one or more polymeric compositions; and~~

~~removing said one or more polymeric compositions from said mold following curing thereof.~~

Claim 25 (currently amended): A method of producing ophthalmic devices from polymeric compositions, said method comprising:

pouring one or more polymeric compositions into a mold prior to curing;

curing said one or more polymeric compositions; and

removing said one or more polymeric compositions from said mold following curing thereof;

wherein said one or more polymeric compositions are produced through a polymerization of one or more non-aromatic-based hydrophobic monomers with one or more macromonomers having a formula of

wherein the R groups are the same or different; each R group is selected from the group consisting of

Serial No. 10/692,387

R₁ is an aromatic-based substituent or an alkyl; x is a non-negative integer; and y is a natural number, said method comprising:

Serial No. 10/692,387

~~pouring said one or more polymeric compositions into a mold prior to curing;~~~~curing said one or more polymeric compositions; and~~~~removing said one or more polymeric compositions from said mold following curing thereof.~~

Claim 26 (currently amended): A method of producing ophthalmic devices from polymeric compositions, said method comprising:

pouring one or more polymeric compositions into a mold prior to curing;

curing said one or more polymeric compositions; and

removing said one or more polymeric compositions from said mold following curing thereof;

wherein said one or more polymeric compositions are produced through a polymerization of one or more non-aromatic-based hydrophilic monomers with one or more macromonomers having a formula of

wherein the R groups are the same or different; each R group is selected from the group consisting of

Serial No. 10/692,387

R_1 is an aromatic-based substituent or an alkyl; x is a non-negative integer, and y is a natural number; ~~said method comprising:~~

~~pouring said one or more polymeric compositions into a mold prior to curing;~~

~~curing said one or more polymeric compositions; and~~

Serial No. 10/692,387

~~removing said one or more polymeric compositions from said mold following curing thereof.~~

Claim 27 (new): A method of producing ophthalmic devices from polymeric compositions, said method comprising:

casting one or more polymeric compositions in the form of a rod;

lathing or machining said rod into disks; and

lathing or machining said disks into ophthalmic devices;

wherein said one or more polymeric compositions are produced through a polymerization of a material comprising one or more macromonomers having a formula of

wherein the R groups are the same or different; each R group comprises an aromatic group having a linking group that covalently attaches the aromatic group to a silicon atom; R₁ is an aromatic-based substituent or an alkyl; x is a non-negative integer; and y is a natural number; and wherein an attachment of the aromatic group to the silicon atom results from a hydrosilylation of an allylic functional group on the aromatic group.

Claim 28 (new): The method of claim 27, wherein said material further comprises a monomer selected from the group consisting of non-siloxy aromatic-based monomers, non-aromatic-based hydrophobic monomers, non-aromatic-based hydrophilic monomers, and combinations thereof.

Claim 29 (new): A method of producing ophthalmic devices from polymeric compositions, said method comprising:

pouring one or more polymeric compositions into a mold prior to curing;

Serial No. 10/692,387

curing said one or more polymeric compositions; and

removing said one or more polymeric compositions from said mold following curing thereof;

wherein said one or more polymeric compositions are produced through a polymerization of a material comprising one or more macromonomers having a formula of

wherein the R groups are the same or different; each R group comprises an aromatic group having a linking group that covalently attaches the aromatic group to a silicon atom; R₁ is an aromatic-based substituent or an alkyl; x is a non-negative integer; and y is a natural number; and wherein an attachment of the aromatic group to the silicon atom results from a hydrosilylation of an allylic functional group on the aromatic group.

Claim 30 (new): The method of claim 29, wherein said material further comprises a monomer selected from the group consisting of non-siloxo aromatic-based monomers, non-aromatic-based hydrophobic monomers, non-aromatic-based hydrophilic monomers, and combinations thereof.
